business of Merck KGaA, Darmstadt, Germany.

Comprehensive Support Services

We aim to support all your processes and applications. Our expertise in technical and regulatory matters ensures robust and reliable aid. We assist you at every stage of drug development and manufacturing, aligned with risk management approaches in current regulatory guidance.

Our digital platforms and international team of engineers and scientists are at your disposal. We help you overcome challenges in process development and manufacturing, allowing you to meet your process objectives.

We offer a comprehensive suite of services. These services are designed to help you either implement established proven technologies, approved by regulatory agencies, or adapt to the latest Pharma and Biopharma technologies and processes. We ensure you're always ahead, helping you stay at the forefront of your field.

How we can help you: Our offerings include equipment and software services, process development support, along with quality and regulatory support.

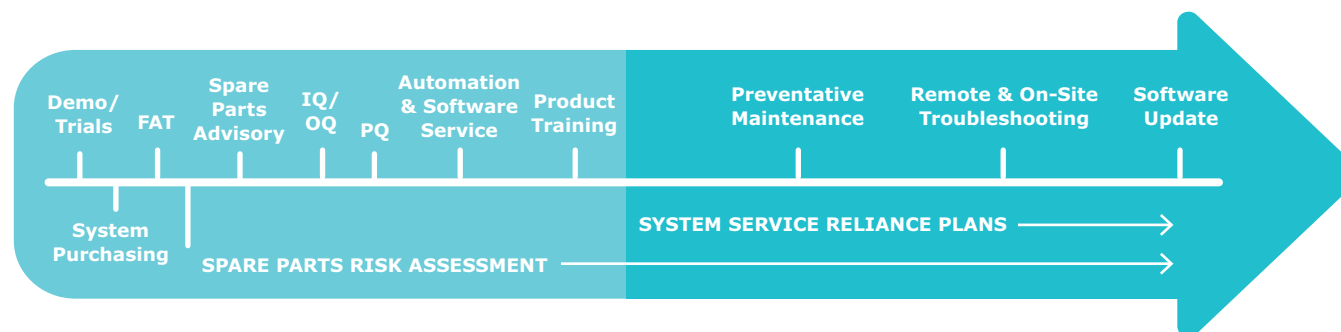

Equipment & Software Services

M Lab™ Collaboration Center Training
Viscosity Reduction Platform
Application Services for Solid Dose Formulation

Process Support

Our engineers, scientists, and process development experts are here to help. They solve your process development and manufacturing problems and train your operators. They analyze and explore new solutions for your site. Our tech experts support you, no matter the molecule or process scale. And they're available wherever you are in the world.

Training and application support can be provided at your facility, on-site at our M Lab™ Collaboration Centers or virtually. We also offer a variety of theoretical and hands-on Biopharmaceutical courses across the entire process train, from upstream to downstream and through final fill.

Quality & Regulatory Support

Emprove® Program
Validation Services
Quality and Regulatory Management

Quality & Regulatory Support

Transparency is our priority. We deliver comprehensive documentation to optimize your processes, qualify products, and conduct risk assessments and audits. Our team can handle various types of validation, E&L testing and patient safety evaluation. We use proven methods to ensure regulatory compliance. Our regulatory experts are ready to guide you. They can address both current and anticipated regulatory needs.
