For a accurate detection of all regulated mycotoxins

Some fungal genera such as *Aspergillus*, *Fusarium* and *Penicillium* produce mycotoxins. These toxic secondary metabolites are harmful to animal and human health if they enter the food chain via contaminated crops and fruits or through processed food and feed products. Therefore, in at least 100 countries, limits are set for mycotoxin levels in food and feed. For a precise detection of all regulated mycotoxins, we offer a comprehensive range of standards, including mixture solutions, ¹³C isotopically labeled standards, certified reference materials (CRM) and dried down standards.

¹³C Isotopically Labeled Internal Standard Solutions for LC-MS

Fully ¹³C isotope-labeled mycotoxin standards (e.g, Aflatoxin B₁-¹³C₁₇; **Figure 1**) are stable, non-radioactive isotopically labeled versions of the target analyte with the same physicochemical properties and thus the same behaviour in work-up procedure and chromatography. These internal standards provide an accurate detection, as they show an optimal mass unit difference between the analyte and the standard, which prevents interference. They also account for variations during sample preparation, cleanup and ionization. We offer labeled Aflatoxins (B1, B2, G1 and G2), Fumonisin (B1, B2, B3), Deoxynivalenol and six other mycotoxin standards.

Dried Down Mycotoxin Standards (RMs)

We offer a series of reference materials as dried down standards which are packaged in amber ampoules to ensure stability. The convenient reconstitution of these standards, made possible by the addition of an appropriate solvent, is described in the Certificate of Analysis enclosed with the product.

Cat. No.	Product Description	Concentration	Pkg

Certified Matrix Reference Materials (CRMs) for Mycotoxin Analysis

CRMs released from JRC and distributed by MilliporeSigma are produced with raw materials to more accurately resemble actual samples in their natural state. For performance control of mycotoxin analysis, we offer compound feed, maize, wheat and peanut butter reference materials. The Mycotoxin Matrix Reference Materials are part of our offering of Food Matrix Materials for various analytes. Please visit SigmaAldrich.com/foodmatrix for a complete overview.

PRODUCT HIGHLIGHT

Marine Biotoxins

Phycotoxins, marine biotoxins produced by certain species of marine algae can accumulate in fish and marine invertebrates such as mussels. To assure safety of sea food, several new regulations have entered into force recommending LC-MS or LC-MS/MS as a detection method.

For the accurate calibration of these methods, we provide certified reference materials (CRMs) in solution.

For more information and an up to date product list please visit SigmaAldrich.com/marinetoxins

Mycotoxin Solution CRMs from JRC

The mycotoxin CRM solutions from JRC provide an accurate determination of detection limits as well as validation of analytical methods. All mycotoxins are dissolved in acetonitrile and solutions are placed in 4 mL amber glass ampules. We offer Aflatoxin M1 dissolved in chloroform.

TraceCERT® Certified Reference Material (CRM) Solutions

Proper calibration of the HPLC instrument is critical to ensure accurate measurement of the mycotoxins present in the samples due to the toxicity of these materials. Our CRM mixtures are produced in a doubly accredited laboratory fulfilling ISO/IEC 17025 and ISO 17034. The standards are certified analytically using direct spectrophotometry and/or HPLC with UV detection. A Certificate of Analysis fulfilling ISO Guide 31 requirements is shipped with each product.
