

Technical Data Sheet

Reinforced Clostridial Agar (RCA)

Ordering number: 1.05410.0500

Medium proposed by BARNES and INGRAM (1956) for the cultivation and enumeration of clostridia, other anaerobes and facultative microorganisms in foodstuffs and other materials.

MUNOA and PARES (1988) developed a Bifidobacterium Iodoacetate Medium (BIM-25) on the basis of Clostridial Agar for the selective cultivation and differentiation of Bifidobacterium species.

Mode of Action

This culture medium is free from inhibitors and contains cysteine as a reducing agent. According to HIRSCH and GRINSTED (1954), Polymyxin B can be added to inhibit Gramnegative bacteria.

Typical Composition (g/L)

Reinforced Clostridial Agar		
Meat extract*	10.0	
Peptone from casein	10.0	
Yeast extract	3.0	
D(+)glucose	5.0	
Starch	1.0	
Sodium chloride	5.0	
Sodium acetate	3.0	
L-cysteinium chloride	0.5	
Agar-agar**	12.5	

^{*} Meat extract is equivalent to the term beef extract.

Millipore SigMa

1.05410.0500 Page 1 of 3

^{**}Agar-agar is equivalent to other different terms of agar.

Preparation

Suspend 50 g/litre, if desired dispense into test tubes, autoclave (15 min at 121 °C). If required, cool to 45-50 °C and add 0.02 g Polymyxin B/litre in form of a filter-sterilized aqueous solution.

pH: 6.8 ± 0.2 at 25 °C.

The medium in the tubes or Petri dishes is clear and yellowish-brown.

Experimental Procedure and Evaluation

Prepare stab cultures of the sample material in test tubes or use the pour-plate technique.

Incubation: 24-48 hours at an optimal temperature (e.g. 35 °C) under anaerobic conditions (e.g. Anaerocult® A, Anaerocult® A mini, or Anaerocult® P).

Count the colonies and, if necessary, perform additional tests.

Storage

Store at +15 °C to +25 °C, dry and tightly closed. Do not use clumped or discolored medium.

Protect from UV light (including sun light). For in vitro use only.

Quality Control

Control strains	Growth after 48h at 35°C*	
Clostridium bifermentans ATCC® 19299	good / very good	
Clostridium novyi ATCC® 17861	good / very good	
Clostridium sporogenes ATCC® 19404 (WDCM 00008)	good / very good	
Clostridium perfringens ATCC® 13124 (WDCM 00007)	good / very good	
Clostridium perfringens ATCC® 10543	good / very good	
Escherichia coli ATCC® 25922 (WDCM 00013)	good / very good	
Bacillus cereus ATCC® 11778 (WDCM 00001)	good / very good	

^{*}QC strains were mixed in tubes with liquefied RCA, then solidified to generate anaerobic conditions and placed in the incubator

Please refer to the actual batch related Certificate of Analysis.
