SIGMA QUALITY CONTROL TEST

Enzymatic Assay of PROTEIN KINASE CATALYTIC SUBUNIT Sigma Prod. Nos. P-2645 and P-8289 Phosphorylating Activity

PRINCIPLE:

Abbreviations used:

$\gamma\text{-}^{32}\text{P}\text{-ATP}$ = Adenosine 5'-Triphosphate $\gamma\text{-}^{32}\text{P}$ label

ADP = Adenosine 5'-Diphosphate

CONDITIONS: T = 30°C, pH = 6.5

METHOD: Radioactive

REAGENTS:

- A. 1000 mM Potassium Phosphate Buffer, pH 6.5 at 30°C
(Prepare 100 ml in deionized water using Potassium Phosphate, Monobasic, Anhydrous, Sigma Prod. No. P-5379. Adjust to pH 6.5 at 30°C with 2 M KOH.)
- B. 5.0% (w/v) Casein Solution (Casein)
(Use Casein, from Bovine Milk, 5% (w/v) Solution, Sigma Prod. No. C-4765.)
- C. 500 mM Magnesium Acetate Solution ($\text{Mg}(\text{OAc})_2$)
(Prepare 10 ml in deionized water using Magnesium Acetate, Tetrahydrate, Sigma Prod. No. M-9147.)
- D. 250 mM Aminophylline Solution (AP)
(Prepare 10 ml in deionized water using Aminophylline, Hydrate, Sigma Prod. No. A-1755.)
- E. 330 mM Dithiothreitol Solution (DTT)
(Prepare 10 ml in deionized water using DL-Dithiothreitol, Sigma Prod. No. D-0632. **PREPARE FRESH.**)
- F. 10.0 mM Adenosine 5'-Triphosphate Solution (ATP)
(Prepare 1 ml in deionized water using Adenosine 5'-Triphosphate, Disodium Salt, Sigma Prod. No. A-5394. **PREPARE FRESH.**)

Enzymatic Assay of PROTEIN KINASE CATALYTIC SUBUNIT
Sigma Prod. Nos. P-2645 and P-8289
Phosphorylating Activity

REAGENTS: (continued)

- G. γ -³²P-Adenosine 5'-Triphosphate Solution (γ -³²P-ATP)
(Use product with minimum radioactive concentration of 30 curies/mmole and 2 millicuries/ml.)
- H. 13.5% (w/v) Trichloroacetic Acid Solution (TCA)
(Prepare 20 ml in deionized water using Trichloroacetic Acid, 6.1 N Solution, approximately 100% (w/v), Sigma Stock No. 490-10.)
- I. Protein Kinase Catalytic Subunit Enzyme Solution
(Immediately before use, prepare a solution containing 200 - 400 units/ml of Protein Kinase Catalytic Subunit in cold Reagent J.)
- J. 39 mM DL-Dithiothreitol Solution (Enzyme Diluent)
(Prepare 10 ml in deionized water using DL-Dithiothreitol, Sigma Prod. No. D-0632.
PREPARE FRESH.)
- K. 6.75% (w/v) Trichloroacetic Acid Solution (Wash Solution)
(Prepare 20 ml in deionized water using Trichloroacetic Acid, 6.1 N Solution, approximately 100% (w/v), Sigma Stock No. 490-10.)
- L. Methylene Cellosolve
(Prepare by adding equal volumes of Ethylene Glycol Monoethyl Ether, Sigma Prod. No. E-2632, to Ethylene Glycol Monomethyl Ether, Sigma Prod. No. E-5378.)
- M. Scintillation Cocktail
(Use Sigma-Fluor Universal LSC Cocktail for Aqueous Samples, Sigma Prod. No. S-4273.)

PROCEDURE:

Prepare a reaction cocktail by pipetting (in milliliters) the following reagents into a suitable container:

Deionized Water	2.00
Reagent A (Buffer)	0.50
Reagent C (Mg(OAc) ₂)	0.25
Reagent D (AP)	0.10
Reagent E (DTT)	0.10
Reagent F (ATP)	0.05

Enzymatic Assay of PROTEIN KINASE CATALYTIC SUBUNIT
Sigma Prod. Nos. P-2645 and P-8289
Phosphorylating Activity

PROCEDURE: (continued)

Mix by swirling. Transfer 1 ml to a suitable container and add enough Reagent G (γ -³²P-ATP) to yield approximately 150,000-200,000 counts/minute (cpm) in 0.05 ml of the solution. Then add 0.50 ml of Reagent B (Casein). This is the Reaction Cocktail.

Pipette 0.05 ml aliquots of Reagent I (Enzyme Solution) into a multiwell disposable titerplate. Place in a 4°C ice bath.

Add 0.05 ml of the Reaction Cocktail to each well and mix by air injection. Immediately transfer the titerplate to a 30°C water bath. Incubate at 30°C for 10 minutes. Then add 0.10 ml of Reagent H (TCA) to each well.

Filter the material in the wells through 0.45 µm Millipore HA Type filters. Wash 3 times with Reagent K (Wash Solution).

Transfer the filters to suitable 2 dram scintillation vials containing 2.00 ml of Reagent L (Methylethyl Cellosolve). To each scintillation vial, add 5 ml of Reagent M. Count the radioactivity in a suitable scintillation counter.

CALCULATIONS:

The total number of picomoles (pMoles) of ATP in the reaction mixture is calculated as follows:

$$\frac{(0.05) (0.01) (10^9)}{(3.00) (1.5)} = 1.1 \times 10^5 \text{ pmole/ml Reaction Cocktail}$$

Find **cpm/pmole** by counting 0.05 ml (5555 pmoles) of the Reaction Cocktail.

0.05 = Volume (in milliliters) of ATP used in the Reaction Cocktail

0.01 = Millimolar concentration of ATP (Reagent F)

10⁹ = Conversion of millimoles to picomoles

3.00 = Intermediate volume (in milliliters) of Reaction Cocktail

1.5 = Total volume (in milliliters) of Reaction Cocktail

$$\text{Units/ml} = \frac{\text{CPM Counted}}{(\text{cpm/pmole}) (10) (0.05)}$$

CPM counted = Actual count - background on filters

Enzymatic Assay of PROTEIN KINASE CATALYTIC SUBUNIT
Sigma Prod. Nos. P-2645 and P-8289
Phosphorylating Activity

CALCULATIONS: (continued)

10 = Time of Assay (in minutes) as per the Unit Definition
0.05 = Volume (in milliliters) of Protein Kinase Catalytic Subunit used

$$\text{Units}/\mu\text{g protein} = \frac{\text{units/ml enzyme}}{\mu\text{g protein/ml enzyme}}$$

UNIT DEFINITION:

One unit will transfer 1.0 picomole (10^{-12} mole) of phosphate from γ - ^{32}P -ATP to hydrolyzed, partially dephosphorylated casein (C-4765) per minute at pH 6.5 at 30°C.

FINAL ASSAY CONCENTRATIONS:

In a 0.10 ml solution, the final assay concentrations are 55 mM potassium phosphate, 14 mM magnesium acetate, 3 mM aminophylline, 4 mM dithiothreitol, 0.055 mM adenosine 5'-triphosphate, 0.83% (w/v) casein, and 10 - 20 units protein kinase catalytic subunit.
