

Product Information

N-Succinyl-Leu-Leu-Val-Tyr 7-Amido-4-Methylcoumarin

Storage temperature −0 °C

S6510

Product Description

Molecular Formula: C₄₀H₅₃N₅O₁₀

Molecular Weight: 763.9 CAS Number: 94367-21-2

This peptide is an inhibitor of neuronal nitric oxide synthase. It has been described as a substrate for heat-shock protein 90 (HSP90) and for proteasome. It has also been described as an inhibitor of chymotrypsin-like enzymes, and as a substrate for chymotrypsin.

When a C-terminal 7-amino-4 methyl coumarin containing peptide is hydrolyzed, the fluorescent compound 7-amino-4-methylcoumarin is released. This compound is monitored by excitation at 380 nm and emission at 460 nm.⁵ However, these wavelengths do not represent the excitation and emission maxima. It has been reported that in 50 mM TES buffer, pH 8.0, containing 10 mM calcium chloride, the excitation maximum is at 345 nm and the emission maximum is at 445 nm.

Precautions and Disclaimer

For laboratory use only. Not for drug, household or other uses.

Preparation Instructions

For laboratory applications, DMSO solutions can be used. To make a solution, add the appropriate amount of DMSO (solubility: 5 mg/mL) to the vial, close tightly, and shake well.

Storage/Stability

The solution of this product in DMSO is stable at -20 °C for more than 1 month, if it is protected from moisture and kept in the dark.
